

Week 7 Assignment: Open It on Your Phone

FlyRank AI Fluency Internship Track | Mobile Responsiveness & Audit Execution

Intern: Vinay Kumar

Track: General AI Fluency

Workload: 4 Hours

Phase: Build+

1. Executive Summary & Deliverables Overview

This document details the mobile optimization, audit workflow, and submission guidelines for the **Week 7 Assignment ("Open It on Your Phone")** of the FlyRank AI Fluency Internship.

Primary Goal: Transition a portfolio website from amateur status to professional quality by performing a physical mobile browser audit, addressing layout overflows, optimizing text legibility, establishing touch-friendly tap targets, and documenting fixes in a structured log.

Submission Requirement	Target Value / Path	Status
Live Portfolio URL	https://vinaysingh-05.github.io/AI-Fluency-FlyRankAI-internship/	Active & Deployed
GitHub Repository	https://github.com/vinaysingh-05/AI-Fluency-FlyRankAI-internship	Source Maintained
Fix Log Location	FlyRank Track Thread Post & README.md	Documented

2. Key Problems Identified & Solutions Applied

A. Mobile Layout Spills & Image Scaling

Problem: Fixed-width elements and large unconstrained images caused horizontal scroll bar issues on mobile viewports (375px–414px width).

Solution: Enforced responsive rules ensuring all images scale dynamically to their parent container dimensions without clipping.

```
.card img {
  width: 100%;
  max-width: 100%;
  height: auto;
  display: block;
  object-fit: cover;
}
```

B. Typography & Readability Standards

Problem: Sub-14px font sizes on dark backgrounds created readability strain on high-DPI smartphone displays.

Solution: Standardized body font size to 16px (1rem), set line height to 1.6, and utilized high-contrast colors (light grey #F3F4F6 on slate dark background #0F172A).

C. Mobile Tap Targets & Spacing

Problem: Hyperlinks and navigation buttons were closely packed, resulting in misclicks on touchscreen devices.

Solution: Increased button dimensions to exceed WCAG minimum touch target size guidelines (at least 44px height) with `0.75rem` `1.25rem` padding.

3. Assets Folder & Relative Path Structure

To ensure project screenshot images render cleanly across all devices without relying on third-party links, images are stored locally in an `assets/images/` folder.

```
your-repo-folder/  
├─ index.html  
├─ README.md  
└─ assets/  
    └─ images/  
        ├─ screenshot-before.png  
        └─ screenshot-after.png
```

Inside Markdown or HTML files, images are embedded using relative paths with width attributes:

```
<!-- HTML Syntax for Mobile Image Scaling -->  
  

```

4. Exact FlyRank Submission Template

Copy and submit the following formatted Markdown text directly into your FlyRank submission box:
