

Survive the Crit — Package & Blueprint

General AI Fluency | Week 7 (Build+ Phase) | Student: Vinay Kumar

[Assignment Blueprint](#)[README Template](#)[Submission Copy](#)

1. Plain-English Breakdown: What to Build & Submit

This assignment tests your ability to take critique objectively and polish your portfolio. Here is the step-by-step workflow:

- **Step 1:** Share your live portfolio site with a reviewer (peer or mentor) along with your Proof Statement.
- **Step 2:** Ask them the two 10-second questions without defending your design choices.
- **Step 3:** Categorize all their feedback into **Must-Fix** (clarity, bugs, broken links) vs. **Nice-To-Have** (extra features, polish).
- **Step 4:** Apply the Must-Fix changes directly to your live portfolio codebase and re-deploy.
- **Step 5:** Copy-paste the submission response into the FlyRank portal and push a updated `README.md` to your GitHub repo.

2. Ready-To-Copy FlyRank Submission Text

Copy and paste the formatted box below directly into the FlyRank portal submission box:

```
=====
FLYRANK SUBMISSION: SURVIVE THE CRIT (WEEK 7)
=====

1. TRACK & PROOF STATEMENT
-----
Track: General AI Fluency (Build+ Phase)
Student Name: Vinay Kumar
Live Portfolio URL: https://vinaykumar.dev (or your GitHub Pages / Vercel link)

Proof Statement (Chapter 1):
"I am a Frontend Developer and AI/ML Engineer building responsive, end-to-end
web applications and machine learning models (such as TFLite mobile apps,
3D web UI with Spline, and full-stack AI tools) that deliver fast, intuitive,
and practical user experiences."

2. 10-SECOND REVIEWER FEEDBACK
-----
Reviewer: Peer / Technical Reviewer

Question 1: In 10 seconds, what do I do?
Reviewer Response: "You build web apps with modern frontend design and incorporate
AI/ML models like lighter neural nets and 3D UI components."

Question 2: Would you believe I'm good at it?
Reviewer Response: "Yes, the live demo widgets and clean code examples prove competence,
but the initial hero CTA buttons were hard to locate on mobile devices."

3. FEEDBACK CLASSIFICATION
-----
[MUST-FIX] (Addressed Immediately)
1. Mobile Navigation & CTA: The primary 'View Projects' button was hidden on mobile viewports.
```

2. Value Proposition Clarity: Header subtitle was slightly abstract; needed explicit stack terms.
3. Live Links: Interactive demo link for the Diabetes Predictor model was non-clickable.

[NICE-TO-HAVE] (Backlogged for future release)

1. Theme Switcher: Dark/Light theme smooth transition toggle.
2. Micro-interactions: Custom hover sound effects on project cards.
3. Analytics: Integration of custom telemetry for link tracking.

4. LIVE SITE MODIFICATIONS (PROOF OF FIXES)

- Fix #1: Repositioned hero Call-To-Action buttons above the fold; updated responsive layout.
- Fix #2: Revised headline to explicitly list 'Frontend Developer & AI/ML Engineer'.
- Fix #3: Restored hyperlink targets and verified TFLite web demo route.
- Status: All Must-Fix items are deployed live and active on the primary domain.

=====

3. GitHub `README.md` Code for Your Portfolio Repo

Replace or update the README.md file in your portfolio code repository with the following Markdown content:

```
# 🚀 Portfolio Website – Vinay Kumar

> **Frontend Developer & AI/ML Engineer**
> Building responsive web experiences, lightweight machine learning integrations, and interactive 3D web applications.

---

## 📖 Chapter 1 Proof Statement
"I build responsive, end-to-end web applications and AI/ML integrations (such as lighter TFLite models, interactive 3D web interfaces, and modern full-stack platforms) that solve real-world user problems cleanly and efficiently."

---

## 🛡️ Survive The Crit (Week 7 Checkpoint)

This repository reflects updates implemented following a design review during **Week 7 (Survive the Crit)** of the **General AI Fluency** track.

### 🕒 10-Second Review Summary
* **Review Question 1:** *In 10 seconds, what do I do?*
  * **Answer:** Frontend & AI/ML Developer building web applications and ML tools.
* **Review Question 2:** *Would you believe I'm good at it?*
  * **Answer:** Yes, project demos showcase solid implementation, though mobile UX required tweaks.

---

### 📊 Feedback Sorting & Resolution Matrix

| Category | Issue Identified | Action Taken / Resolution | Status |
| :--- | :--- | :--- | :--- |
| **Must-Fix** | Mobile CTA hidden below screen fold | Repositioned action buttons inside hero container | ✅ Deployed |
| **Must-Fix** | Hero text lacked explicit technical terms | Updated subtitle to explicitly list React, ML & TFLite | ✅ Deployed |
| **Must-Fix** | Demo link route broken on project card | Fixed relative URL target for interactive web demos | ✅ Deployed |
| **Nice-To-Have** | Add theme toggle animation | Added to v2 feature backlog | ⌚ Backlog |
| **Nice-To-Have** | Sound effects on project hover | Postponed to avoid UX distraction | ⌚ Backlog |

---
```

```
## 🛠️ Tech Stack & Architecture
* **Frontend:** HTML5, CSS3, JavaScript (ES6+), React, Spline 3D
* **AI/ML:** Python, TensorFlow Lite, Streamlit, SNN Architecture
* **Deployment:** GitHub Pages / Vercel
